

# Case Study: Serinus WO Campaign (2022-2023)

## Results

- Lack of historical Well data
- Heavy fishing operations
- Old wells with integrity issues
- Complex interventions
- Lack of Engineering
- Repetitive Failures
- No Root Cause Analysis
- Lack of Service Co. support
- Equipment availability
- Human errors / Competency

- Provided the right people with experience in similar Ops
- Collected, organized and used many well info from different sources
- Continuous support from iWDS Management
- Root Cause Analysis
- Corrective Actions and follow-up
- Market Intelligence / Benchmarking
- Engineering and innovative solutions (i.e: fishing decision tree, fishing economics...)
- Effective communication
- Frequent Service Quality Meetings

- ZERO Lost Time Incident
- Full compliance with regulations and company policies
- Retrieved 2800 m of fish (concentric completion 2 3/8" x 3 1/2" and 1.5" CTU)
- Removed wellbore restrictions
- Delivered 2 WO on time and within Budget
- Right decision at the right time to stop fishing and plan for sidetrack (based on fishing economics)

## Challenges
